- Javascript
- ReactJS
- NodeJS
- ExpressJS
- MongoDB
- HTML, CSS

Language

English

Korean

Russian

Uzbek

Experience

○ **2023**
Al-Fraganus Freelancing Team
React and NodeJS developer

We mostly created telegram bots and fetched data from free APIs' on the internet. Built react apps to to test our versioning ability through Github.
Through freelancing team, we have learned how to cooperate and extend application into many separate parts

○ **2023-2024, Dec-May**
Mansur_Ipakchi   📍 Tashkent, Chilanzar
Sole NodeJS developer

Mansur Ipakchi transitioned from offline to online completely and they started selling through Instagram and Telegram. Therefore, they called me to make their telegram bot. They requested user registration, database and admin functionality which also shows user list for only admin with their detailed information. Moreover, they requested catalogs to add types of products and within catalogs, they asked for edit, delete product functionality. After everything accomplished, I configured VPS from Eskiz.uz , then uploaded the NodeJS backend to the server. Telegram bot started working without a problem.

○ **2024, June-Oct**
Algoritm   📍Tashkent region,Almalyk
Javascript Fetcher

Algoritm front-end team had problem with fetching Back-end for their new CRM, which is written in JAVA Spring Boot.So they called me to fetch middle parts to separate into login, sign-up,student dashboard and admin dashboard interfaces. I have used pure Javascript to separate interfaces via API.
